

# Aphasia

Aphasia, also known as Dysphasia, is when a person has difficulty with their language or speech. It can be very mild, and sometimes can only affect one form of communication, such as reading or speaking, but it usually affects several aspects of communication at the same time. In its severest form, the person with aphasia may have very little, or no, speech and find it difficult to follow a simple conversation.

Everyone with asthma has their own personal set of triggers and symptoms.

84.5% of people have never heard the term "Aphasia."

20,000 people each year, in the UK, will develop Aphasia

More than 350,000 people with aphasia in the UK

20,000 people will develop Aphasia each year, in the UK

A stroke is the biggest cause of Aphasia
